SUMMARY

Full-stack developer who ships production software end to end. Built and deployed a live booking and payments platform solo for a client with a 1.2M-follower audience, now processing real customer transactions. Strong in TypeScript, React, Next.js, and PostgreSQL, with a network engineering and application security foundation. Comfortable owning a feature from database schema to production deployment.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, C#, Java, SQL, Swift, HTML/CSS
Frameworks & Libraries	React, Next.js, Node.js, Express.js, FastAPI, .NET, Spring Boot, Tailwind CSS
Databases & Cloud	PostgreSQL, Supabase, Prisma, MongoDB, Oracle, SQL Server, Vercel, Google Cloud Run, Docker
Practices & Tools	REST API design, CI/CD, GitHub Actions, Git, Jest, Vitest, pytest, Agile, Linux/UNIX
Security & Networking	OAuth 2.0, JWT/JWKS verification, Row Level Security, rate limiting, CORS/CSP, TCP/IP, IPv6

WORK EXPERIENCE

Freelance Full-Stack Developer | TheTripMan (Contract, revenue-share)

Aug 2025 – Present

Remote, Ontario

- Engineered and deployed a booking and payments platform solo for a transportation business with a 1.2M-follower audience, generating \$1,000+ in revenue across 11+ bookings in a single month.
- Integrated Stripe checkout with webhook-driven confirmation, eliminating unpaid reservations by committing a booking only after payment settles.
- Built an authenticated admin dashboard that replaced manual phone and direct-message booking management, removing the client's daily dependency on a developer.
- Designed the PostgreSQL schema with Prisma and automated email and calendar confirmations, cutting manual follow-up on every reservation to zero.
- Deployed to production on Vercel with GA4 analytics, jest-axe accessibility tests, and a Husky-enforced CI pipeline.

Freelance Web Developer | Puffy (Client)

2026

Oakville, ON

- Designed and shipped a mobile-first marketing site for a local dessert business with no prior web presence, establishing its first search-indexed storefront.
- Implementing a QR-code in-store menu and Google Business listing to convert foot traffic into online discovery.

PROJECTS

Feather, AI Market Insights Platform | Capstone, team of 4

2025 – 2026

React, TypeScript, FastAPI, Python, Vercel Edge Functions, Firebase Auth, PostgreSQL, Docker | [Live Demo](#)

- Ranked #1 of 50+ projects at the 2026 Sheridan capstone showcase, graded 97/100, delivered across a full academic year.
- Identified a critical authentication vulnerability in the production API that allowed any caller to read or write any user account, and verified it against the live service before designing the fix.
- Architected the API gateway that closed it using Vercel Edge Functions, implementing Firebase ID token verification against Google JWKS, allowlist routing, and dual-window rate limiting on shared PostgreSQL counters.
- Audited the database and remediated 12 tables running without Row Level Security, including user profile data, via SQL migration.

Bloom, Cloud-Synced Life Planner | Independent product

2026 – Present

React, TypeScript, Vite, Supabase, PostgreSQL, Zustand, Tailwind CSS, PWA | [Live Demo](#)

- Launched a production planner covering calendar, tasks, habits, notes, journal, goals, and focus timing, live and in daily use.
- Engineered an offline-first sync layer committing writes to local state before debounced PostgreSQL persistence, keeping the interface responsive with zero network latency and fully functional offline.
- Implemented Realtime subscriptions for cross-device sync and enforced Row Level Security across 10 tables, isolating every account at the database layer.

Le Pathétique, Multimodal AI Web App | BearHacks 2026, solo build

2026

Next.js, React, TypeScript, Google Cloud Vision, Gemini, ElevenLabs | [GitHub](#) | [DevPost](#)

- Built a multimodal pipeline chaining Google Cloud Vision, Gemini, and ElevenLabs to convert a photo into spoken critique and generated recipes, solo, within one weekend.
- Implemented an offline fallback mode that degrades gracefully when a third-party API fails, keeping the live demo functional through venue network outages.

EDUCATION

Sheridan College | Oakville, ON

August 2026

Advanced Diploma, Computer Systems Technology, Software Development & Network Engineering

Relevant coursework: AI & Machine Learning, Cloud Systems, iOS Development, .NET/C#, Database Design, Enterprise Java, Computer & Network Security, Linux/UNIX.

CERTIFICATIONS

CCNA IP Addressing & Subnetting · IPv6 Fundamentals (APNIC) · Cisco Introduction to Cybersecurity · LinkedIn Networking Foundations
