

Muhammed Cengiz

Full-Stack Developer

 muhammedcengiz2778@gmail.com |  linkedin.com/in/muhammed-cengiz |  github.com/Cengizbey-m |  Greater Toronto Area, Canada |  Canadian Permanent Resident

SUMMARY

Full-stack developer with an advanced diploma in Software Development and Network Engineering and a track record of shipping software that people use. Built and maintain a booking and payments platform processing live Stripe transactions for a client with a 1.2M-follower audience. On a year-long capstone ranked #1 of 50+ projects, I found and fixed a critical authentication flaw and built the API gateway, token verification, and rate limiting that now protect the service. Also designed and launched Bloom, a cloud-synced planner with offline support and realtime multi-device sync. Canadian permanent resident, available across the Greater Toronto Area or remote.

EXPERIENCE

Full-Stack Developer (Contract) · TheTripMan / Trvoo 2025 – Present
Greater Toronto Area

- Sole developer of a production booking and payments platform for a transportation business with a 1.2M-follower audience. Live, taking real payments, maintained under a revenue-share agreement.
- Integrated Stripe checkout with webhook-driven confirmation, so a booking is committed only after payment settles. Unpaid reservations can no longer reach the database.
- Replaced DM and phone-based booking management with an authenticated admin dashboard, ending the client's daily dependency on a developer.
- Modelled the PostgreSQL schema with Prisma, automated confirmation email and calendar invites, and ship schema changes against live traffic.
- Added Jest and jest-axe accessibility tests enforced by Husky pre-commit hooks and CI.

Tech: Next.js 15, TypeScript, Tailwind, Stripe, PostgreSQL, Prisma, Resend, Vercel, Jest

Web Developer (Contract) · Puffy Patisserie 2026
Greater Toronto Area

- Took a local business with no online presence to a launched, mobile-first site covering products, location, and hours, built at phone width first because that is where local discovery happens.
- Currently adding a QR-code in-store menu and a Google Business listing to capture local search traffic.

Tech: Next.js, TypeScript, Tailwind CSS, Vercel

Software Developer, Capstone (Team of 4) · Feather, Sheridan College 2025 – 2026
Oakville, ON

- Ranked #1 of 50+ projects at the 2026 capstone showcase, graded 97/100 in the final term. Delivered over a full academic year with a team of four.
- Found a critical authentication flaw in the live API: it accepted a client-supplied header as proof of identity, letting any caller read or write any account. Verified it against production before designing the fix.
- Built the API gateway that closed it, on Vercel edge functions. It verifies Firebase ID tokens against Google's JWKS, discards client-supplied identity, and rewrites user fields in request bodies so neither channel can be spoofed.
- Added allowlist routing so undeclared paths return 404 without reaching the backend, and dual-window rate limiting backed by shared PostgreSQL counters, replacing a service that had no limiting at all.
- Audited the database, found 12 tables running without Row Level Security including user profiles, and shipped the migration that enabled it.
- Repaired a CI pipeline that had been failing on every run, then cleared the 129 lint errors and 5 test failures hidden behind it.
- Earlier in the project, owned the model evaluation layer that scores predictions against naive baselines, and defined the API contract between the Python service and the React client.

Tech: TypeScript, React, Vercel Edge Functions, Firebase Auth, PostgreSQL, Supabase, FastAPI, Python, Docker, GitHub Actions, Vitest, pytest

PROJECTS

Bloom, Cloud-Synced Life Planner (live product) · Independent product · bloom-cal.vercel.app

2026 – Present

Sole developer and designer

- Designed, built, and launched a complete planner covering seven connected modules: calendar, tasks, habits, notes, journal, goals, and a focus timer. Live and in daily use.
- Built an offline-first sync layer where writes commit to local state immediately and sync to PostgreSQL on a debounce, so the interface never waits on the network and keeps working with no connection at all.
- Added Realtime subscriptions so edits reach every signed-in device within seconds, and enforced Row Level Security across 10 tables so accounts are isolated at the database layer rather than by client-side checks.
- Shipped as an installable PWA with Workbox, using Google OAuth for sign-in and DOMPurify to sanitize user-authored markdown.

Tech: React 18, TypeScript, Vite, Supabase, PostgreSQL, Zustand, Tailwind CSS v4, Workbox

Le Pathétique, Multimodal AI Application · BearHacks 2026

2026

Solo build

- Built a multimodal pipeline chaining Google Cloud Vision, Gemini Flash, and ElevenLabs to turn a photo into spoken critique and generated recipes, solo, in one weekend.
- Implemented a graceful offline fallback mode so the application degrades predictably when a third-party API is unavailable.

Tech: Next.js 16, React 19, TypeScript, Google Cloud Vision, Gemini, ElevenLabs

EDUCATION

Advanced Diploma, Software Development & Network Engineering (SDNE)

August 2026

Sheridan College, Oakville, ON

- Capstone ranked #1 of 50+ projects** at the 2026 showcase, graded 97/100 in the final term.
- Coursework across full-stack development, databases, enterprise Java, .NET, iOS, cloud-enabled networks, and computer and network security.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Java, C#, SQL, C, HTML, CSS
Frontend	React, Next.js (App Router), Tailwind CSS, shadcn/ui, Framer Motion, Vite, PWA
Backend	Node.js, Express, FastAPI, REST API design, JWT authentication, role-based access control, Stripe
Data	PostgreSQL, Prisma, Supabase, MongoDB, SQLAlchemy, schema design, migrations
Infrastructure & Tools	Docker, Git, GitHub Actions, CI/CD, Vercel, Linux, Jest, jest-axe, Postman
Networking & Security	TCP/IP, subnetting, IPv6, DNS, cloud-enabled networks, Row Level Security, OWASP fundamentals

CERTIFICATIONS

CCNA IP Addressing & Subnetting · IPv6 Fundamentals (APNIC) · Cisco Introduction to Cybersecurity · LinkedIn: Networking Foundations
